

Protective Covers

For standard circular connectors

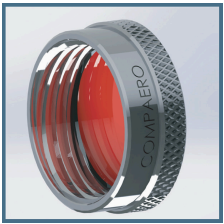

Compaero design, manufacture and supply an extensive range of protective accessories that provide effective moisture and dust protection for almost every known circular connector.

A protective cover is an essential part of interconnect assemblies. It protects plugs and receptacles from dust, moisture, dirt and contact bending.

Compaero offers a wide range of protective covers with both bayonet and threaded coupling styles.
A variety of security rings and eyelets of all sizes are also available with a wide selection of lanyard types and lengths for customization.

PLUG COVER
